

What is a 3D scanner?

A tri-pod mounted infrared camera that spins 360 degrees capturing its surroundings.

How 3D scanning benefits our clients

- Preserves a virtual reality walkthrough of the scene at the time of the scan.
- Enables us to provide 3D floor plans, a 3D model of the structure and individual rooms and to zoom into a space to view details.
- Provides a clear perspective of the loss.

How 3D scanning benefits the analysis

- A scan allows us to take measurements of the space, create CAD floorplans, 3D models for fire modeling and more.
- Enables us to continue to collect data after the scene has been released.
- Virtually preserves the space for our client, arbitrators, the judge and the jury.

Recommended for

- Large property loss
- Fatality cases

After scanning and processing

- A hyperlink can be shared and viewed from your desktop, iOS or Android phone/ tablet within 24 hours of completion.
